## *THE DESIGNER - SOGAND NOBAHAR*

I cannot say I'm an artist, nor a designer, nor an engineer. I think I represent a right mix of all these things.

Thanks to a curious and highly dynamic mentality, I have always accepted the challenges that have arisen from time to time in my life and I have always dealt with new problems effectively.

Despite a strong interest in craftwork and a natural predisposition to painting and drawing, I decided to study mathematics. I subsequently specialized in Industrial Design in Tehran (Iran) and completed my training in design and engineering in Italy.

A strongly interdisciplinary training and some subsequent work experiences led me to found **Nobahar Design** and not to identify myself in any scheme.

As Nassim Nicholas Taleb claims:

“I want to live happily in a world I don't understand.”

Is it unconventional? Well, let it be **as unconventional as it is!**

## *THE FIRM - NOBAHAR DESIGN*

The word "Nobahar" literally means "New Spring" and therefore indicates a rebirth, a renewal, and a regrowth. These are the foundations on which **Nobahar Design** is born. Each design is built from a concept and every idea is translated into an object that represents it.

**Nobahar Design** is based on the concept of **mix and match**, which is the combination of tradition and innovation in every aspect: materials, design, and concepts. A new way of seeing and perceiving things, of interacting with the world around us and of building unique, identifying and expressive pieces.
