

Come and see the amazing world of new SM'art designs

#### SoHo

A new SM'art project developed with the express purpose of creating a classic design, but with the help of new technologies and aesthetic solutions. It's a planked oak design with half flaming, very elegant and interpreted in a modern key with synchronized wood-pore.

The background of the design is uniform, while the pore is net and in a strong contrast. The surface is smooth in the background and very deep and opaque in the pore, creating an exceptional realism. It's totally different from all the synchro-pore realizations on the market, sometimes rustic and excessive.

#### WOW!

This new SM'art design can only amaze you. It's a wood, irregular flamed, with very large scale and important cathedrals, elegant but not discrete, enhanced by a synchronized wood-pore that makes the product identical to a chiseled wood.

#### Aniline

It's a panel with bright, fresh and funny colors with synchro-pore structure. Let yourself be carried by the chromaticity of aniline dyes. You'll seem to be on a cruise in the Greek islands.

#### Trama

Have you ever dreamed of having a fully waterproof and chemicals resistant fabric, with high resistance to impact, scratch and abrasion, with which you can «suit» a shop furniture an home environment, or even the interior of the furniture? Trama is the right choice for you! You will discover a very matt finish, structured, with a nice touch declined in beautiful fabric tones.
