

HELLA PROJECT:

Chapel Petrassi is glad to present during Design Week 2017 in Milan Hella Project, a new bench prototype series in 5VIE District.

Hella is the latest series of art furniture by Chapel Petrassi composed by sculptural seatings entirely made of metal and characterized by geometric and wave shapes, each featuring a selection of color.

This pieces represent an extension of the designer's investigation into ways to experiment new processes and materials by creating an interaction between object and sculpture-furniture.

Hella prototype is composed by three metallic units; the wave seating is carved from a single block of aluminum through Water jet cutting while it features legs made from the section of aluminium tubular with a dismantled top.
